

【2021 Advanced Computer Networks Homework 5】

【簡介】

使用 c 語言製作 subnet IP scanner ，

首先取得輸入 interface 的 ip 和 netmask ，

之後依序對同個網段的主機發出 ICMP request ，確認對方是否存在

【指令】

編譯

```
make
```

執行

```
sudo ./ipscanner -i INTERFACE -t TIMEOUT
```

【執行結果】

1. ifconfig

```

2. 輸入正確指令

The screenshot shows a Visual Studio Code editor window with a terminal open. The terminal title is "main.c - TCP/IP - Visual Studio Code". The terminal content shows a user running a series of commands to compile and execute a program named "ipscanner". The output shows a successful compilation and a network scan of the IP address 140.117.168.0/24. The scan results show that the destination is unreachable for all IP addresses in the range.

```

```

3. request packet

A screenshot of the Wireshark network protocol analyzer interface. The top status bar shows "en", signal strength icons, volume icon, power icon, date/time "12月 22 17:22", and window title "Wireshark · Packet 303273 - eno1". The main pane displays the selected packet's details tree and hex/text representation.

The details tree on the left includes:

- Protocol: ICMP (1)
 - Header checksum: 0xb023 [validation disabled]
 - [Header checksum status: Unverified]
 - Source: 140.117.168.64
 - Destination: 140.117.168.5
- Internet Control Message Protocol
 - Type: E (Echo (ping) request)
 - Code: 0
 - Checksum: 0xc345 [correct]
 - [checksum Status: Good]
 - Identifier (BE): 64785 (0xfeedf1)
 - Identifier (LE): 4685 (0x11fd)
 - Sequence number (BE): 5 (0x0005)
 - Sequence number (LE): 1289 (0x0509)
 - [Response frame: 303274]
- Data (84 bytes)
 - Data: 6d3130333034303035360000000000000000000000000000..
 - [Length: 84]

The hex dump at the bottom shows the raw data of the packet. It consists of two parts:

- A header section from offset 0000 to 007F containing fields like type, code, checksum, identifier, sequence number, etc., each represented by four hexadecimal bytes.
- An application-specific payload starting at offset 0080, which contains ASCII text: "... F... .. E- p'9@ ... # u @ u ... E- : m10394 0056 ... ". The first part of this text corresponds to the IP addresses mentioned in the packet headers above.
